

DECKBUILDERS

DESIGNED TO REFLECT A LIFESTYLE

CASE STUDY:

Chatham Waters

LOCATION: Kent

COMPLETED: 2020

Chatham Waters is a large development of 199 luxury apartments in Kent, with far-reaching views over the historic Chatham Docks.

Each of the 199 homes features its own large balcony space with Euroclass A1 fire-rated aluminium decking and porcelain paving used interchangeably throughout the scheme to provide zoning and interest.

SYSTEMS USED

AluTerrace aluminium decking system with boards in RAL 7036 (Platinum Grey) passes beautifully into Quadro porcelain in the shade 'Argento'.

Selected for their low-height build-up, TerracePave paving system and AluTerrace decking systems utilise very similar low-height non-combustible RP-FR and RD-FR pedestals, which work together to achieve a seamless transition between zones.

DETAIL

The contrasting external flooring is mirrored in the intermittent placement of the glass screening throughout the buildings in the scheme, providing a distinctive and luxurious appearance.
